SIMPSON ROAD WAREHOUSE, AIR QUALITY, HEALTH RISK, ENERGY AND GREENHOUSE GAS ASSESSMENT RESPONSE TO COMMENTS

Urban Crossroads, Inc. is pleased to provide the following Air Quality, Health Risk, Energy and Greenhouse Gas Assessment Response to Comments for the proposed Simpson Road Warehouse development, which is located at the intersection of Simpson Road and Warren Road in the City of Hemet. A copy of the SCAQMD comments dated June 28, 2024, is provided in Attachment A.

SOUTH COAST AIR QUALITY MANAGEMENT DISTRICT LETTER

COMMENT A3.3

Potential Underestimation of Operational Emissions Due to Inaccurate Assumptions for Truck Trip Lengths

The Draft EIR states that in order to determine the emissions from trucks, the operational air quality impact analysis was based, in part, on the assumption that the average daily truck trip length is 39.9 miles for 4+-axle heavy-heavy-duty trucks (HHDT), 15.3 miles for 2-axle trucks (LHDT1, LHDT2), and 14.2 miles for 3-axle trucks (MHDT). The Draft EIR then states that a weighted average trip length of 30.47 miles (based on traffic trip percentages) was used. The Proposed Project site, however, is located approximately 90 miles away from the Ports of Long Beach and Los Angeles (Ports), which means that the air quality analysis underestimated the emissions from trucks traveling from the Ports to the Proposed Project site. For this reason, Staff recommends the Lead Agency revise the calculations in the Final EIR by taking a project-specific approach to the vehicle trip length. Tailoring these parameters and assumptions to be based on project-specific data will ensure a more accurate assessment of emissions, accounting for the unique circumstances and logistical realities of the Proposed Project.

RESPONSE A3.3

The comment states that the truck trip length is not appropriate given the proposed Project's distance from the Ports of Los Angles. However, it should be noted that the analysis utilizes truck trip distances based on guidance from

SCAQMD's Rule 2305 Second Staff Report, which recommends the use of a 14.2 mile trip length for class 4-7 trucks (LHDT1/2 and MHDT) and 39.9 miles for class 8 trucks (HHDT). As such, a weighted average truck trip distance was utilized based on the assumed fleet mix. Additionally, it should be noted that these trip lengths are based on averages, and not all Project truck trips would be to the Ports of Los Angeles and Long Beach, with many truck trips taking the form of local deliveries and other trips that would be significantly shorter.

COMMENT A 3.4

Use of South Coast AQMD's Mass Rate Localized Significance Threshold (LST) Look-Up Table to Analyze the Proposed Project's Localized Air Quality Impact is not Consistent with Guidance for the LST Methodology

The Proposed Project covers approximately 71.11 net acres. Appendix C of the Draft EIR states that during construction up to 15 acres/day can be actively disturbed during grading. The Lead Agency uses South Coast AQMD's Mass Rate LST Look-up Table for five acres as a screening tool to determine if the Proposed Project's construction and operational daily emissions of NOx, CO, PM10 and PM2.5 could result in a significant impact to local air quality. South Coast AQMD staff, however, developed the LST methodology for proposed projects that are less than or equal to five acres. For projects that are greater than five acres in size, Staff recommends lead agencies perform project-specific dispersion modeling to determine operational localized air quality impacts. For construction, if project sites are greater than five acres in size and disturb more than five acres/day during the construction phase, as this Proposed Project is anticipated to do during grading, Staff also recommends lead agencies perform project-specific dispersion modeling to determine construction localized air quality impacts. Staff therefore recommends the Lead Agency to: 1) perform project-specific air dispersion modeling for the Proposed Project's construction and operational phase emissions to determine localized air quality impacts; and 2) include the results in the Final EIR.

RESPONSE A3.4

Although the use of SCAQMD's Mass Rate LST Look-up tables provides for a conservative screening analysis for localized impacts, air dispersion modeling utilizing AERMOD version 23132 was performed for construction and operational emissions in response to this comment. Modeling in AERMOD was performed consistent with SCAQMD recommendations, with emissions modeled using volume sources covering the Project site. For construction emissions, fugitive dust emissions were modeled as a ground-based area source, while volume sources were used for construction equipment exhaust emissions. As shown below on Tables 1 and 2 for construction and operation, respectively, Project construction and operational emissions would not exceed SCAQMD localized significance thresholds at the maximally exposed receptor location. AERMOD dispersion modeling outputs are presented in Attachment B.

COMMENT A3.5 – A3.6

Cumulative Impacts during Operation

Table 5-1 of the Draft EIR provides a list of 24 projects that are considered in the cumulative impact analysis of the Proposed Project. Of these 24 projects, four are described as warehouse projects (project #16, #17, #20, and #23). Staff recommends the Lead Agency add another proposed warehouse project to the list, the Hemet Logistics West Project. According to the Notice of Preparation (NOP) for the Hemet Logistics West Project, SCH No. 2024051197 (NOP comment period of 5/29/2024 through 7/12/24), the Hemet Logistics West Project will consist of developing four industrial buildings with a combined gross floor area of 1,101,894 sq ft. This project is proposed to be built on 60.86 acres of currently vacant and undeveloped land near the southwest intersection of West Acacia Avenue and Cawston Avenue, Hemet, CA.

Additionally, Per CEQA Guidelines Section 15065(a)(3), South Coast AQMD staff is primarily concerned with the cumulative air quality impacts from increased concentrations of air toxics in the region. Pursuant to CEQA which requires an analysis of direct, indirect, and cumulative impacts, South Coast AQMD has initiated a public process to develop additional guidance for evaluating cumulative air quality impacts from increased concentrations of air toxics for CEQA

projects. As of the date on this comment letter, there have been five public working group meetings (WGMs) allocated to development of this proposed cumulative impact policy. For general information on WGMs #1 through #5 and to gain familiarity with this developing policy, please visit South Coast AQMD's webpage at https://www.aqmd.gov/home/rules-compliance/ceqa/ceqa-policy-development-(new). Given the aforementioned, Staff recommends that, at minimum, the Lead Agency perform a qualitative analysis in order to disclose the potential cumulative impacts from air toxics in consideration by listing all surrounding past, present, and probable future projects. The Lead Agency may also perform a more detailed and robust quantitative analysis of cumulative air toxics and its potential health risk implications and include such an analysis in the Final EIR.

RESPONSE A3.5 – A3.6

The comment states that the analysis does not consider cumulative impacts resulting from increased concentrations of air toxics in the region associated with cumulative projects. Specifically, the comment mentions four cumulative warehouse projects described in Table 5-1 of the DEIR, as well as the Hemet West Logistics Project. These cumulative projects include the following:

- #16 – Kirby Industrial: 831,348 square foot (SF) high-cube warehouse
- #17 – JD Fields & Company (SDR 21-021): 3,000 SF office, 22,000 SF warehouse
- #20 – National Tube Steel (SDR 23-002): 107,310 SF warehouse
- #23 – Hemet 63: 1,140,401 SF high-cube warehouse
- Hemet Logistics West: 1,101,894 SF warehouse

The comment notes that SCAQMD has held five public working group meetings aimed at developing methodology for the evaluation of cumulative health risks, there is currently no recommended methodology, policy, or guidance for evaluating these cumulative impacts.

However, based on guidance published in SCAQMD's *White Paper on Potential Control Strategies to Address Cumulative Impacts from Air Pollution*[1], projects that do not exceed project-specific significance thresholds are considered by SCAQMD to have a less than significant cumulative impact as well. It should be noted that the proposed Project does not exceed the SCAQMD's cancer risk threshold of 10 in one million or the non-cancer risk threshold of 1.0; as such, under this guidance the proposed Project would be considered to have a less than significant health risk impact both at the individual project and cumulative levels.

As discussed below, even if the potential health risk from the proposed Project as well as the six cumulative projects identified in the comment is evaluated, the proposed Project would still result in a less than significant cumulative health risk impact to the community.

[1] Accessed at http://www.aqmd.gov/docs/default-source/Agendas/Environmental-Justice/cumulative-impacts-working-group/cumulative-impacts-white-paper.pdf

The Kirby Industrial project is located approximately 11,050 feet (2.1 miles) northeast of the proposed Project site, and approximately 7,950 feet from a proposed Project truck route on Warren Road.

The JD Fields & Company project is located approximately 15,000 feet (2.8 miles) northeast of the proposed Project site, and approximately 12,000 feet from a proposed Project truck route on Warren Road.

The National Tube Steel project is located approximately 9,900 feet (1.9 miles) northeast of the proposed Project site, and approximately 6,900 feet from a proposed Project truck route on Warren Road.

The Hemet 63 project is located approximately 9,150 feet (1.7 miles) northeast of the proposed Project site, and approximately 4,000 feet from a proposed Project truck route on Warren Road.

The Hemet Logistics West project is located approximately 6,200 feet northeast of the proposed Project site, and approximately 3,900 feet from a proposed Project truck route on Warren Road.

As discussed above, each of these cumulative projects is located well over 1,000 feet from the proposed Project and proposed Project truck routes. As such, TAC emissions from these cumulative projects combined with those from the proposed Project would not have the potential to result in a cumulatively significant health risk impact.

COMMENT A3.7

Truck Idling Diesel Particulate Matter (DPM) Emissions and Building Downwash Option in Operational Phase Health Risk Assessment (HRA)

Staff reviewed the operational phase HRA air quality modeling files that the Lead Agency provided and notes that the building downwash effect was modeled for a 238-horsepower diesel fire pump's DPM emissions. Staff also notes that the building downwash effect was not modeled for truck idling DPM emissions. By not modeling the building downwash effect for the trucking idling DPM emissions, the dispersion model results in an underestimation of ground-level pollutant concentrations near the building. The effects of building downwash can cause maximum ground level concentrations to more than double. To model the building downwash effect of truck idling DPM emissions, the truck idling emissions must first be classified in AERMOD as a point source-type. As stated in South Coast AQMD Risk Assessment Procedures for Rules 1401, 1401.1 and 212, the algorithms used in building downwash only affect point source types and do not affect volume source types. The Proposed Project's operational HRA modeling file show that the truck idling DPM emissions have been classified as line volume source types. Staff therefore recommends: 1) truck idling DPM emissions be modeled as point source types; 2) include building downwash effect on such DPM emissions in the model; and 3) include the updated HRA results and air quality analysis in the Final EIR.

RESPONSE A3.7

Comment noted. The HRA has been revised to model idling truck exhaust as point sources rather than volume sources, and as such building downwash is now accounted for in the model for these emission sources. Tables 3 and 4 below present the operational risk and combined construction and operational risk, respectively, for the revised modeling.

TABLE 3: SUMMARY OF OPERATIONAL CANCER AND NON-CANCER RISKS

Time Period	Location	Maximum Lifetime Cancer Risk (Risk per Million)	Significance Threshold (Risk per Million)	Exceeds Significance Threshold
30 Year Exposure	Maximum Exposed Sensitive Receptor (Location R3)	1.47	10	NO
25 Year Exposure	Maximum Exposed Worker Receptor (Location R6)	0.08	10	NO
Time Period	**Location**	**Maximum Hazard Index**	**Significance Threshold**	**Exceeds Significance Threshold**
Annual Average	Maximum Exposed Sensitive Receptor (Location R3)	<0.01	1.0	NO
Annual Average	Maximum Exposed Worker Receptor (Location R6)	<0.01	1.0	NO

TABLE 4: SUMMARY OF CONSTRUCTION AND OPERATIONAL CANCER AND NON-CANCER RISKS

Time Period	Location	Maximum Lifetime Cancer Risk (Risk per Million)	Significance Threshold (Risk per Million)	Exceeds Significance Threshold
30 Year Exposure	Maximum Exposed Sensitive Receptor (Location R1)	1.30	10	NO
Time Period	**Location**	**Maximum Hazard Index**	**Significance Threshold**	**Exceeds Significance Threshold**
Annual Average	Maximum Exposed Sensitive Receptor (Location R1)	<0.01	1.0	NO

As shown above in Table 3, with truck idling emissions modeled as point sources as well as the inclusion of the building downwash option, operational risk at the maximum exposed sensitive receptor remained unchanged at 1.47 in one million, while operational risk at the maximum exposed worker receptor was reduced from 0.09 in one million to 0.08 in one million. As shown in Table 4, the combined construction and operational cancer risk at the maximum exposed sensitive receptor increased slightly from 1.29 in one million to 1.30 in one million. AERMOD modeling outputs are presented in Attachment C, and detailed risk calculations are presented in Attachment D.

COMMENT A3.8 – A3.10

Additional Recommended Air Quality and Greenhouse Gases (GHG) Project Design Considerations

In the event that any of the above recommendations for the Proposed Project result in significant adverse air quality impacts, CEQA requires that all feasible mitigation measures that go beyond what is required by law be utilized to minimize or eliminate any such impacts. Staff also notes that the Proposed Project's land use amendment to the City of Hemet General Plan results in the Proposed Project being located adjacent to land parcels designated as Mixed Use (MU) land uses -with the MU designation intended for commercial, residential, and recreational uses- as well as other residential land use types (see Figure 1 below). Currently much of the land parcels adjacent to the Proposed Project site are utilized for farming activities (see Figure 2 below). South Coast AQMD is concerned about the potential public health impacts of siting new sensitive populations within proximity of existing air pollution sources (DPM emissions from Proposed Project). For the above reasons, prior to approving this Proposed Project, the Lead Agency is recommended to consider additional project design features (PDFs) and/or mitigation measures to further reduce the Proposed Project's air quality and GHG impacts. Staff recommends incorporating the following PDFs and mitigation measures into the Final EIR:

PDFs and Mitigation Measures for Construction and Operational Air Quality Impacts from Mobile Sources

1. Require zero-emissions (ZE) or near-zero emission (NZE) on-road haul trucks, such as heavy-duty trucks with natural gas engines that meet the California Air Resources Board's (CARB) adopted optional NOx emissions standard at 0.02 grams per brake horsepower-hour (g/bhp-hr), if and when feasible.

   Note: Given the state's clean truck rules and regulations aiming to accelerate the utilization and market penetration of ZE and NZE trucks, such as the Advanced Clean Trucks Rule and the Heavy-duty Low NOx Omnibus Regulation, ZE and NZE trucks will become increasingly more available to use.

2. Require a phase-in schedule to incentivize the use of cleaner operating trucks to reduce any significant adverse air quality impacts.

   Note: South Coast AQMD staff is available to discuss the availability of current and upcoming truck technologies and incentive programs with the Lead Agency.

3. Limit the daily number of trucks allowed at the Proposed Project to levels analyzed in the Final CEQA document. If higher daily truck volumes are anticipated to visit the site, the Lead Agency should commit to re-evaluating the Proposed Project through CEQA prior to allowing this higher activity level.

4. Provide electric vehicle (EV) charging stations or, at a minimum, provide electrical infrastructure, and electrical panels should be appropriately sized. Electrical hookups should be provided for truckers to plug in any onboard auxiliary equipment. Where appropriate, include environmental analyses to evaluate and identify sufficient electricity and supportive infrastructures in the Energy and Utilities and Service Systems Sections in the CEQA document.

PDFs and Mitigation Measures for Operational Air Quality Impacts from Other Area Sources

1. Maximize the use of solar energy by installing solar energy arrays.
2. Use light-colored paving and roofing materials.

Design Considerations for Reducing Air Quality and Health Risk Impacts

1. Design the Proposed Project such that truck entrances and exits are not facing sensitive receptors and trucks will not travel past sensitive land uses to enter or leave the Proposed Project site.
2. Design the Proposed Project such that any truck check-in point is inside the Proposed Project site to ensure no trucks are queuing outside.
3. Design the Proposed Project to ensure that truck traffic inside the Proposed Project site is as far away as feasible from sensitive receptors.
4. Restrict overnight truck parking in sensitive land uses by providing sufficient overnight truck parking inside the Proposed Project site.

Lastly, South Coast AQMD also suggests that the Lead Agency conduct a review of the following references and incorporate additional mitigation measures as applicable to the Proposed Project in the Final EIR:

1. State of California – Department of Justice: Warehouse Projects: Best Practices and Mitigation Measures to Comply with the California Environmental Quality Act
2. South Coast AQMD 2022 Air Quality Management Plan, specifically:
    a. Appendix IV-A – South Coast AQMD's Stationary and Mobile Source Control Measures
    b. Appendix IV-B – CARB's Strategy for South Coast
    c. Appendix IV-C – SCAG's Regional Transportation Strategy and Control Measure
3. United States Environmental Protection Agency (U.S. EPA): Mobile Source Pollution – Environmental Justice and Transportation

RESPONSE A3.8 – A3.10

Comment noted. As noted in the Air Quality and Health Risk Assessment analyses, the proposed Project would result in less than significant impacts with regard to construction and operational regional emissions, localized emissions, and cancer and non-cancer health risk impacts. As such, there is no nexus for mitigation under CEQA.

However, it should be noted that as presented in the GHG analysis, the proposed Project will implement several mitigation measures that would reduce GHG emissions by mobile source emissions and reducing energy and water consumption.

COMMENT A3.11

South Coast AQMD Air Permits and Role as a Responsible Agency

The Draft EIR states that the Proposed Project is required to obtain a permit from South Coast AQMD for the anticipated 238-horsepower fire pump. If implementation of the Proposed Project

would require the use of new stationary and portable sources, including but not limited to emergency generators, fire water pumps, boilers, spray booths, etc., air permits from South Coast AQMD will be required and the role of South Coast AQMD would change from a Commenting Agency to a Responsible Agency under CEQA. In addition, if South Coast AQMD is identified as a Responsible Agency, per CEQA Guidelines Sections 15086, the Lead Agency is required to consult with South Coast AQMD. CEQA Guidelines Section 15096 sets forth specific procedures for a Responsible Agency, including making a decision on the adequacy of the CEQA document for use as part of evaluating the applications for air permits. For these reasons, the Final EIR should include a discussion about any new stationary and portable equipment requiring South Coast AQMD air permits and identify South Coast AQMD as a Responsible Agency for the Proposed Project.

The Final EIR should also include calculations and analyses for construction and operation emissions for the new stationary and portable sources, as this information will also be relied upon as the basis for the permit conditions and emission limits for the air permit(s). Please contact South Coast AQMD's Engineering and Permitting staff at (909) 396-3385 for questions regarding what types of equipment would require air permits. For more general information on permits, please visit South Coast AQMD's webpage at: http://www.aqmd.gov/home/permits.

RESPONSE A3.11

The analysis assumes that the building would include installation of a stationary fire pump. Because the emergency engine is expected to exceed a rating of 50 horsepower, it is anticipated that the emergency engine would require an SCAQMD air permit. Should any additional stationary equipment be required, the City of Hemet will inform SCAQMD as the responsible agency. However, at this time it is unknown what other types of equipment may be required, and as such it would be speculative to include stationary equipment beyond the anticipated fire pump.

Draft Environmental Impact Report (EIR) for the Proposed Newland Simpson Road Hemet Project (Proposed Project) (SCH No. 2023120462)

South Coast Air Quality Management District (South Coast AQMD) staff appreciate the opportunity to review the above-mentioned document. The City of Hemet is the California Environmental Quality Act (CEQA) Lead Agency for the Proposed Project. To provide context, South Coast AQMD staff (Staff) has provided a brief summary of the project information and prepared the following comments. **A3.1**

South Coast AQMD Staff's Summary of Project Information in the Draft EIR

Based on the Draft EIR, the Proposed Project consists of the construction and operation of two warehouses buildings (Building 1 and Building 2) totaling 1,192,418 square feet (sq ft) of development on 71.11 net acres of currently farmed land within the City of Hemet in Riverside County.[1] Building 1 will be developed as an 883,080 sq ft building on 44.22 acres and will include: 1) 838,926 sq ft of warehouse space; 2) 144 truck loading docks; and 3) the generation of 334 truck trips per day (167 trucks inbound + 167 trucks outbound).[2,3,4] Building 2 will be developed as a 309,338 sq ft building on 18.73 acres and will include: 1) 293,871 sq ft of warehouse space; 2) 50 truck loading docks; and 3) the generation of 118 truck trips per day (59 trucks inbound + 59 trucks outbound).[5,6,7] **A3.2**

The Proposed Project is expected to operate 24 hours/day, seven days/week, and does not anticipate cold storage facilities.[8] The nearest sensitive receptor, a private residence, is located approximately 930 feet southeast of the Proposed Project site (28744 Warren Road, Hemet, 92545) and the nearest off-site worker is located approximately 405 feet west.[9,10] Construction is anticipated to occur in one phase, commence in the 1st quarter of 2025, and be completed by the 2nd quarter of 2026 (lasting approximately 14 months).[11,12] The Proposed Project is located near the southeast intersection of Simpson Rd and Warren Rd.[13]

Potential Underestimation of Operational Emissions Due to Inaccurate Assumptions for Truck Trip Lengths

The Draft EIR states that in order to determine the emissions from trucks, the operational air quality impact analysis was based, in part, on the assumption that the average daily truck trip length is 39.9 miles for 4+-axle heavy-heavy-duty trucks (HHDT), 15.3 miles for 2-axle trucks (LHDT1, LHDT2), and 14.2 miles for 3-axle trucks (MHDT).[14] The Draft EIR then states that a weighted average trip length of 30.47 miles (based on traffic trip percentages) was used.[15] The Proposed Project site, however, is located approximately 90 miles away from the Ports of Long Beach and Los Angeles (Ports), which means that the air quality analysis underestimated the emissions from trucks traveling from the Ports to the Proposed Project site. For this reason, Staff recommends the Lead Agency revise the calculations in the Final EIR by taking a project-specific approach to the vehicle trip length. Tailoring these parameters and assumptions to be based on project-specific data will ensure a more accurate assessment of emissions, accounting for the unique circumstances and logistical realities of the Proposed Project. **A3.3**

Use of South Coast AQMD's Mass Rate Localized Significance Threshold (LST) Look-Up Table to Analyze the Proposed Project's Localized Air Quality Impact is not Consistent with Guidance for the LST Methodology

The Proposed Project covers approximately 71.11 net acres. Appendix C of the Draft EIR states that during construction up to 15 acres/day can be actively disturbed during grading.[16] The Lead Agency uses South Coast AQMD's Mass Rate LST Look-up Table for five acres as a screening tool to determine if the Proposed Project's construction and operational daily emissions of NOx, CO, PM10 and PM2.5 could result in a significant impact to local air quality.[17] South Coast AQMD staff, however, developed the LST methodology for proposed projects that are less than or equal to five acres.[18] For projects that are greater than five acres in size, Staff recommends lead agencies perform project-specific dispersion modeling to determine *operational* localized air quality impacts. For *construction*, if project sites are greater than five acres in size and disturb more than five acres/day during the construction phase, as this Proposed Project is anticipated to do during grading, Staff also recommends lead agencies perform project-specific dispersion modeling to determine *construction* localized air quality impacts. Staff therefore recommends the Lead Agency to: 1) perform project-specific air dispersion modeling for the Proposed Project's construction and operational phase emissions to determine localized air quality impacts; and 2) include the results in the Final EIR. **A3.4**

Cumulative Impacts during Operation

Table 5-1 of the Draft EIR provides a list of 24 projects that are considered in the cumulative impact analysis of the Proposed Project.[19] Of these 24 projects, four are described as warehouse projects (project #16, #17, #20, and #23). Staff recommends the Lead Agency add another proposed warehouse project to the list, the Hemet Logistics West Project. According to the Notice of Preparation (NOP) for the Hemet Logistics West Project, SCH No. 2024051197 (NOP comment period of 5/29/2024 through 7/12/24), the **A3.5**

Hemet Logistics West Project will consist of developing four industrial buildings with a combined gross floor area of 1,101,894 sq ft. This project is proposed to be built on 60.86 acres of currently vacant and undeveloped land near the southwest intersection of West Acacia Avenue and Cawston Avenue, Hemet, CA. **A3.5 Cont.**

Additionally, Per CEQA Guidelines Section 15065(a)(3), South Coast AQMD staff is primarily concerned with the cumulative air quality impacts from increased concentrations of air toxics in the region. Pursuant to CEQA which requires an analysis of direct, indirect, and cumulative impacts, South Coast AQMD has initiated a public process to develop additional guidance for evaluating cumulative air quality impacts from increased concentrations of air toxics for CEQA projects. As of the date on this comment letter, there have been five public working group meetings (WGMs) allocated to development of this proposed cumulative impact policy. For general information on WGMs #1 through #5 and to gain familiarity with this developing policy, please visit South Coast AQMD's webpage at https://www.aqmd.gov/home/rules-compliance/ceqa/ceqa-policy-development-(new). **A3.6**

Given the aforementioned, Staff recommends that, at minimum, the Lead Agency perform a qualitative analysis in order to disclose the potential cumulative impacts from air toxics in consideration by listing all surrounding past, present, and probable future projects. The Lead Agency may also perform a more detailed and robust quantitative analysis of cumulative air toxics and its potential health risk implications and include such an analysis in the Final EIR.

Truck Idling Diesel Particulate Matter (DPM) Emissions and Building Downwash Option in Operational Phase Health Risk Assessment (HRA)

Staff reviewed the operational phase HRA air quality modeling files that the Lead Agency provided and notes that the building downwash effect was modeled for a 238-horsepower diesel fire pump's DPM emissions.[20] Staff also notes that the building downwash effect was not modeled for truck idling DPM emissions. By not modeling the building downwash effect for the trucking idling DPM emissions, the dispersion model results in an underestimation of ground-level pollutant concentrations near the building. The effects of building downwash can cause maximum ground level concentrations to more than double.[21] To model the building downwash effect of truck idling DPM emissions, the truck idling emissions must first be classified in AERMOD as a *point* source-type. As stated in South Coast AQMD Risk Assessment Procedures for Rules 1401, 1401.1 and 212, the algorithms used in building downwash only affect *point* source types and do not affect *volume* source types.[22] The Proposed Project's operational HRA modeling file show that the truck idling DPM emissions have been classified as *line volume* source types. Staff therefore recommends: 1) truck idling DPM emissions be modeled as *point* source types; 2) include building downwash effect on such DPM emissions in the model; and 3) include the updated HRA results and air quality analysis in the Final EIR. **A3.7**

Additional Recommended Air Quality and Greenhouse Gases (GHG)Project Design Considerations and Mitigation Measures

In the event that any of the above recommendations for the Proposed Project result in significant adverse air quality impacts, CEQA requires that all feasible mitigation measures that go beyond what is required by law be utilized to minimize or eliminate any such impacts. Staff also notes that the Proposed Project's land use amendment to the City of Hemet General Plan results in the Proposed Project being located **A3.8**

adjacent to land parcels designated as Mixed Use (MU) land uses -with the MU designation intended for commercial, residential, and recreational uses- as well as other residential land use types (see Figure 1 below).[23,24] Currently much of the land parcels adjacent to the Proposed Project site are utilized for farming activities (see Figure 2 below). South Coast AQMD is concerned about the potential public health impacts of siting new sensitive populations within proximity of existing air pollution sources (DPM emissions from Proposed Project). For the above reasons, prior to approving this Proposed Project, the Lead Agency is recommended to consider additional project design features (PDFs) and/or mitigation measures to further reduce the Proposed Project's air quality and GHG impacts. Staff recommends incorporating the following PDFs and mitigation measures into the Final EIR:

PDFs and Mitigation Measures for Construction and Operational Air Quality Impacts from Mobile Sources

1. Require zero-emissions (ZE) or near-zero emission (NZE) on-road haul trucks, such as heavy-duty trucks with natural gas engines that meet the California Air Resources Board's (CARB) adopted optional NOx emissions standard at 0.02 grams per brake horsepower-hour (g/bhp-hr), if and when feasible.

A3.9

Note: Given the state's clean truck rules and regulations aiming to accelerate the utilization and market penetration of ZE and NZE trucks, such as the Advanced Clean Trucks Rule and the Heavy-duty Low NOx Omnibus Regulation, ZE and NZE trucks will become increasingly more available to use.

2. Require a phase-in schedule to incentivize the use of cleaner operating trucks to reduce any significant adverse air quality impacts.

   Note: South Coast AQMD staff is available to discuss the availability of current and upcoming truck technologies and incentive programs with the Lead Agency.

3. Limit the daily number of trucks allowed at the Proposed Project to levels analyzed in the Final CEQA document. If higher daily truck volumes are anticipated to visit the site, the Lead Agency should commit to re-evaluating the Proposed Project through CEQA prior to allowing this higher activity level.

4. Provide electric vehicle (EV) charging stations or, at a minimum, provide electrical infrastructure, and electrical panels should be appropriately sized. Electrical hookups should be provided for truckers to plug in any onboard auxiliary equipment. Where appropriate, include environmental analyses to evaluate and identify sufficient electricity and supportive infrastructures in the Energy and Utilities and Service Systems Sections in the CEQA document.

PDFs and Mitigation Measures for Operational Air Quality Impacts from Other Area Sources

1. Maximize the use of solar energy by installing solar energy arrays.

2. Use light-colored paving and roofing materials.

Design Considerations for Reducing Air Quality and Health Risk Impacts

1. Design the Proposed Project such that truck entrances and exits are not facing sensitive receptors and trucks will not travel past sensitive land uses to enter or leave the Proposed Project site.

2. Design the Proposed Project such that any truck check-in point is inside the Proposed Project site to ensure no trucks are queuing outside.

3. Design the Proposed Project to ensure that truck traffic inside the Proposed Project site is as far away as feasible from sensitive receptors.

4. Restrict overnight truck parking in sensitive land uses by providing sufficient overnight truck parking inside the Proposed Project site.

Lastly, South Coast AQMD also suggests that the Lead Agency conduct a review of the following references and incorporate additional mitigation measures as applicable to the Proposed Project in the Final EIR:

South Coast AQMD Air Permits and Role as a Responsible Agency

The Draft EIR states that the Proposed Project is required to obtain a permit from South Coast AQMD for the anticipated 238-horsepower fire pump.[28,29] If implementation of the Proposed Project would require the use of new stationary and portable sources, including but not limited to emergency generators, fire water pumps, boilers, spray booths, etc., air permits from South Coast AQMD will be required and the role of South Coast AQMD would change from a Commenting Agency to a Responsible Agency under CEQA. In addition, if South Coast AQMD is identified as a Responsible Agency, per CEQA Guidelines Sections 15086, the Lead Agency is required to consult with South Coast AQMD. CEQA Guidelines Section 15096 sets forth specific procedures for a Responsible Agency, including making a decision on the adequacy of the CEQA document for use as part of evaluating the applications for air permits. For these reasons, the Final EIR should include a discussion about any new stationary and portable equipment requiring South Coast AQMD air permits and identify South Coast AQMD as a Responsible Agency for the Proposed Project.

A3.11

The Final EIR should also include calculations and analyses for construction and operation emissions for the new stationary and portable sources, as this information will also be relied upon as the basis for the permit conditions and emission limits for the air permit(s). Please contact South Coast AQMD's Engineering and Permitting staff at (909) 396-3385 for questions regarding what types of equipment would require air permits. For more general information on permits, please visit South Coast AQMD's webpage at: http://www.aqmd.gov/home/permits.

Conclusion

As set forth in California Public Resources Code Section 21092.5(a) and CEQA Guidelines Section 15088(a-b), the Lead Agency shall evaluate comments from public agencies on the

South Coast AQMD staff received the Notice of Availability of a Draft Environmental Impact Report (NOA/DEIR) for the **Proposed Newland Simpson Road Hemet Project** (South Coast AQMD Control Number: RVC240522-11). Staff is currently in the process of reviewing the NOA/DEIR. The public commenting period is from 5/17/2024 – 7/1/2024.

Upon review of the files provided as part of the public review period, I was able to access the Draft EIR and Appendices on the City's website.

Please provide an electronic copy of any live modeling and emission calculation files (complete files, not summaries) that were used to quantify the air quality impacts from construction and/or operation of the Proposed Project as applicable, including the following:

- CalEEMod Input Files (.csv files);
- Live EMFAC output files;
- Any emission calculation file(s) (live version of excel file(s); no PDF) used to calculate the Project's emission sources (i.e. truck operations);
- AERMOD Input and Output files, including AERMOD View file(s) (.isc);
